

October 3, 2022

Dear Customer:

Western Extrusions Corporation located in Carrollton, Texas, is a manufacturer of aluminum extruded profiles. These profiles are designed to meet customer specifications and are produced in a wide variety of custom and semi-custom finishes including, mill finish, painted, and anodized. Shapes may also be produced with or without thermal barriers.

Western Extrusions uses material produced by its cast house and large, well-established producers of aluminum both foreign and domestic. Most of the foreign sources are distributed evenly between Argentina, Australia, and Malaysia.

Western's cast house provides 60% of the aluminum produced by Western. Western's cast house scrap content is 78% is postindustrial scrap and 22% post-consumer scrap.

Western's external sources for aluminum account 40% of its consumed aluminum. The scrap content on average is 45% post industrial scrap and 20% post-consumer scrap content.

Sincerely,

A handwritten signature in black ink that reads "Stephen A. Rodriguez".

Steve Rodriguez
Director of Customer Quality and Engineering
